PRODUCTS FREZEED FOR EXPORTATION

UY!FISH

UY!FISH Natural Product

comes to life after years of friendship between a group of young entrepreneurs, along both sides of the Uruguay river, which united and dreamt of the possibility of creating and carrying out an unprecedented River Plate (Rioplataense) Project. Thus, uniting "the different", this company rises up with successful results. They founded this company dedicated to the industrialization of fish and surely, in the near future, new products for export, always referring to Natural Products of Premium Quality.

It is our mission to provide our customers the best satisfaction with the offered products, establishing a long term bond and covering at the same time each one needs, being able to offer something unique in the market and committing ourselves with a high-quality products manufacture

With that in mind, we comply with all required National and International qualifications, from safety and hygiene to MGAP, DINARA and HACCP.

UY!FISH

Focused on providing a product of excellence, we are the only fish industry located in the Department of Colonia, a few minutes away from the loading port and as our origins say this allows us to unite both the fish from Fresh Water and the fish from the Sea. With a significant infrastructure, technology, training and innovation investment, we created an efficient, modern and dynamic plant to meet the demands of our customers all over the world.

UY!FISH

Its strategic location was chosen because it is one of the main supply points for freshwater fish and the logistics also allow processing saltwater fish. In this way, the transport of the product become very short, thus achieving a fresh fish to preserve the cold chain, necessary to meet the primary objective.

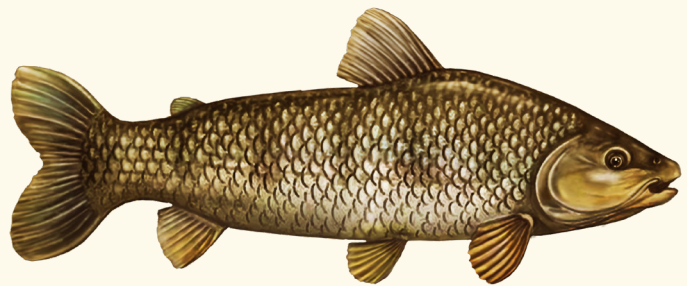

It is our Vision to become the largest fresh and saltwater fish industrial plant in the area, offering a great variety of products to the entire world.
